

Take a screenshot or a video clip of a recording using the VMS Software

Quick Help

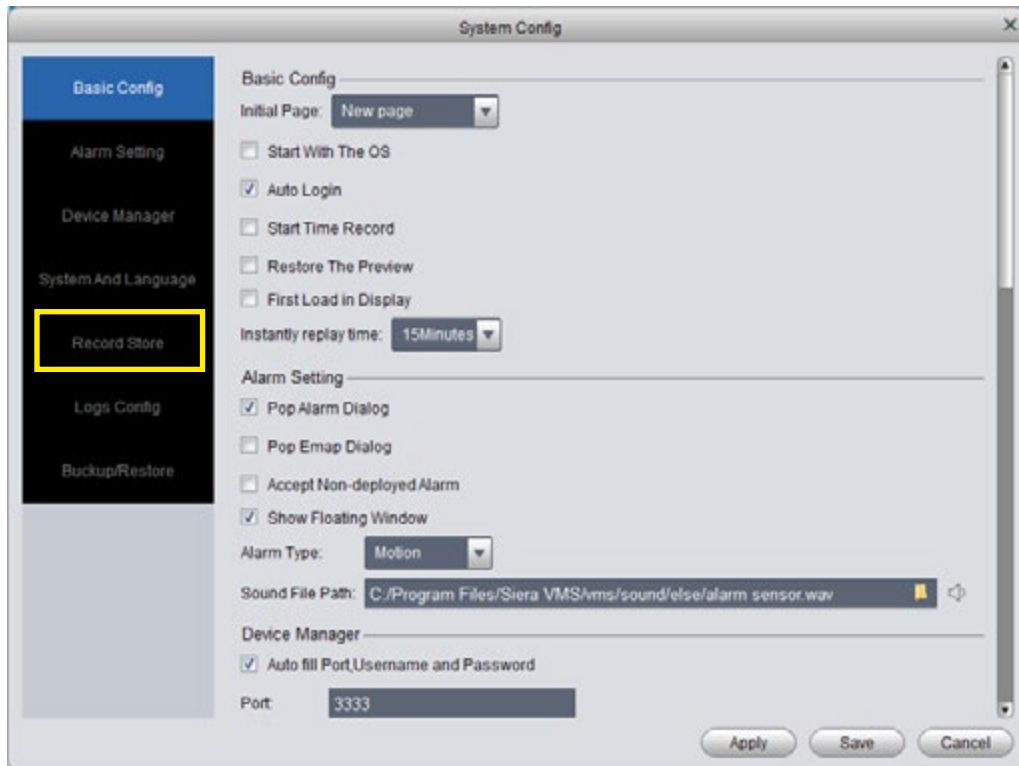

1° Enter the VMS software.

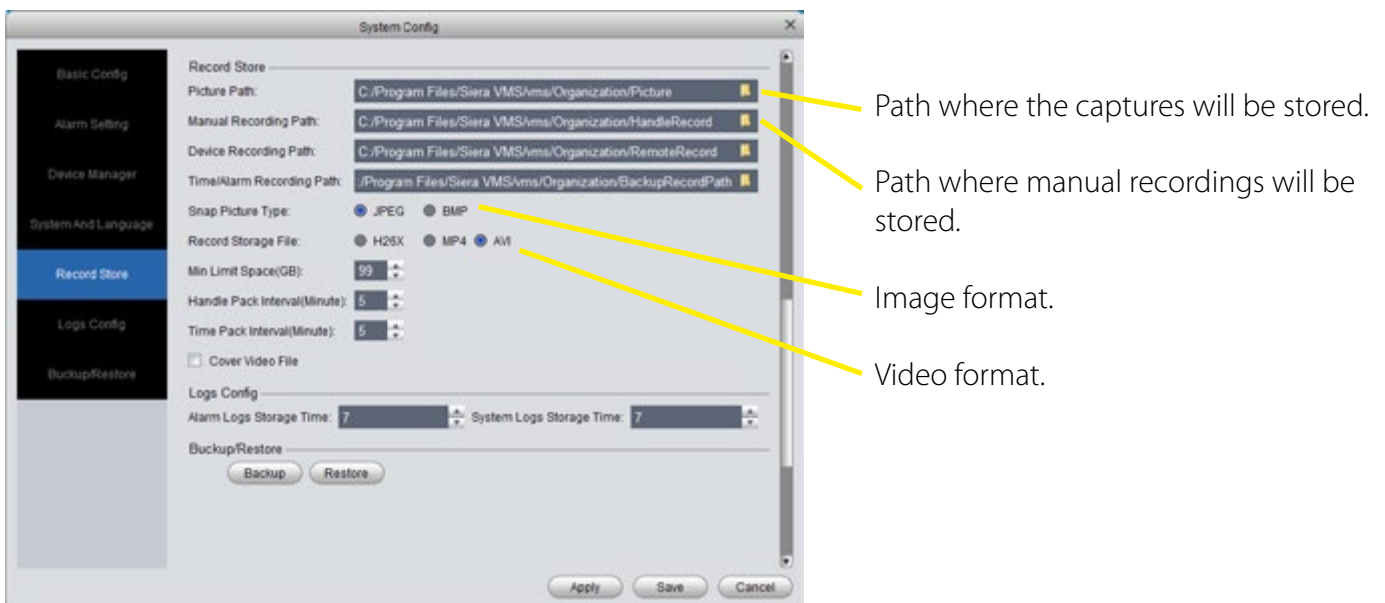

2° Go into settings to select the recording paths and formats.

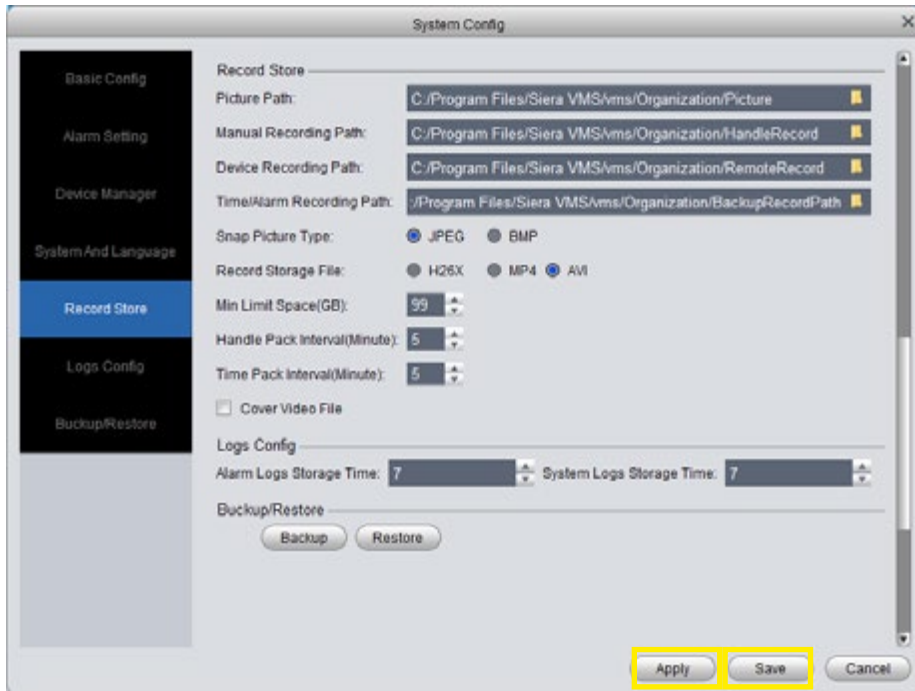

3° Select "Record Store".

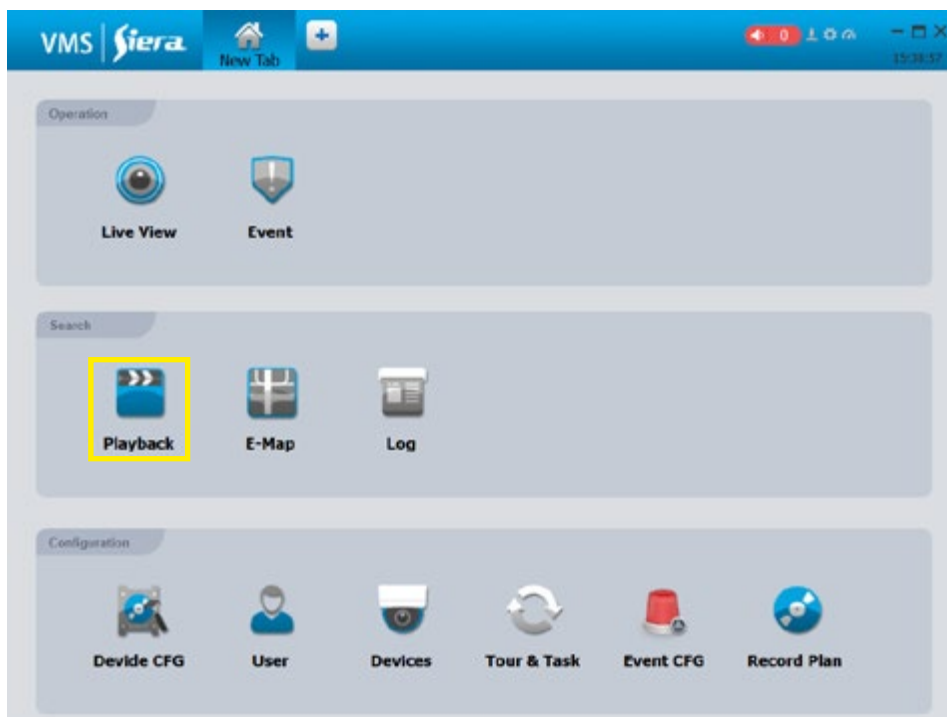

4° In this section you can configure the storage parameters.

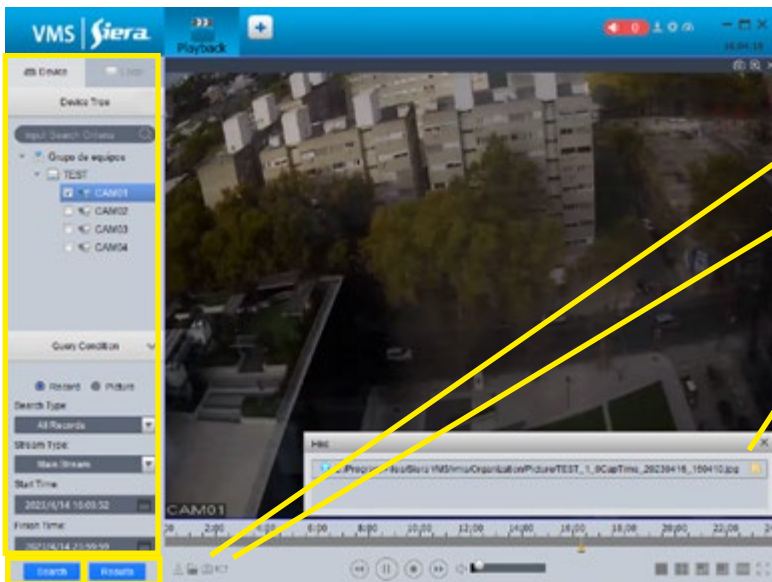

5° After making the settings, press “Apply” and then “Save”.

6th Enter “Playback”.

7° Select the camera, date and time of the playback, and in the same view you can take an image capture or a video clip as shown below.

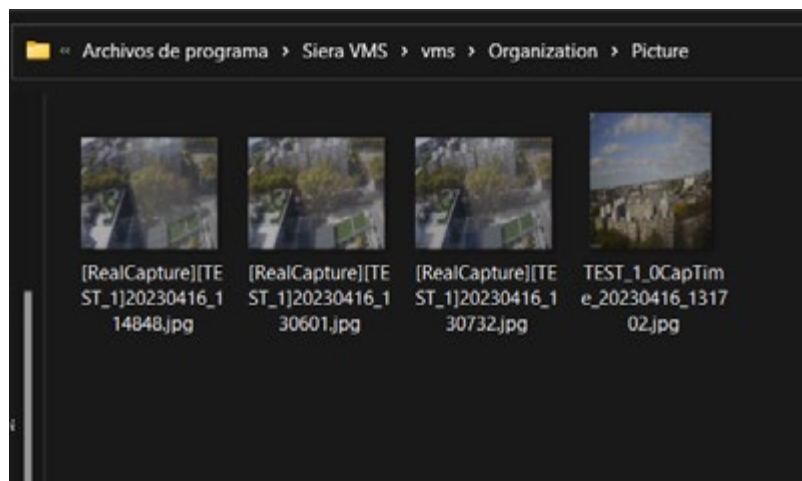

To capture an image press the button.

To start or stop a video clip press the button.

Path where the capture or video clip was stored. You will be able to click on that path to open that folder.

8° Once the procedure is finished, you will be able to access the folder on the PC to be able to view or operate with them.
